

THE HIDDEN COMPLIANCE RISKS WITHIN YOUR BUILDING

A Practical Guide to Ventilation,
Grease Extraction & Fire Compliance

We help organisations
identify hidden risks,
demonstrate
compliance and protect
people, property and
business continuity.

Welcome to Interduct

Every building relies on systems that are rarely seen but are essential to keeping people safe, maintaining healthy environments and ensuring legal compliance.

Ventilation systems, grease extraction systems and fire dampers often operate unnoticed in the background.

Because they are out of sight, they can easily become out of mind.

These hidden systems can present significant operational, financial and life safety risks if they are not properly inspected, maintained and tested.

This guide explains why these systems matter, the risks of neglecting them and how organisations can take a proactive approach to protecting their buildings through effective compliance management.

**Your Compliance Is
Our Commitment**

Our Mission and Vision

Mission

Your Compliance is Our Commitment – creating peace of mind and helping to reduce risk.

Vision & Values

Our vision is to be the most trusted provider of reliable compliance solutions, delivering confidence and assurance to every customer we serve. We are driven by a set of core values that define who we are and how we work:

RESPECT

We treat every person — client, colleague, or partner — with fairness, integrity, and consideration. We listen, we care, and we act with empathy and humility.

DIGNITY

We believe in creating a culture where every individual feels valued and empowered. We uphold high standards of ethical conduct and hold ourselves accountable in all interactions.

PROFESSIONALISM

We bring expertise, consistency, and commitment to every task. We take pride in our work and deliver on our promises with discipline and excellence.

OUR VALUES are not just words, they guide our decisions, shape our culture, and fuel our mission to help eliminate risk and create peace of mind through outstanding compliance services.

Interduct UK Ltd

YOUR TRUSTED COMPLAINT PARTNER

Interduct UK Ltd is a specialist compliance partner helping organisations manage the hidden risks associated with ventilation, extraction and passive fire protection systems.

We work with a diverse network of organisations in the private and public sector providing expert inspection, cleaning, testing and remedial services that help maintain safe, compliant and efficiently operating buildings.

We cover all regions within the UK

Our approach goes beyond simply delivering a service. We provide detailed reporting, photographic evidence and practical recommendations and solutions that give our clients a clear understanding of their compliance position and the confidence to make informed decisions.

Through our two specialist divisions, Grease Extraction and Ventilation & Fire Compliance, we help organisations reduce risk, demonstrate compliance and protect people, property and business continuity.

Why Compliance Matters

HIDDEN RISKS SHOULD NEVER BE IGNORED

Many of the most serious risks within a building are the ones that cannot be seen.

Ventilation systems, grease extraction systems, fire dampers and bathroom/washroom extract systems often operate unnoticed in the background. Because they are out of sight, they can easily become out of mind.

Without regular inspection, maintenance and testing, these hidden systems can present significant safety, operational and compliance risks.

Hidden Risks

These are not always obvious. Planned maintenance helps identify gaps in compliance, emerging issues and vulnerabilities before they lead to harm or failure.

Certified Compliance

Provides building owners and duty holders with assurance that their building is operating in line with relevant legal and regulatory requirements, while providing evidence to demonstrate certified compliance.

Competence

The use of competent, accredited contractors helps ensure work is completed to recognised standards and supports certified compliance.

Peace of Mind

Assurance that risk is understood, systems are maintained and responsibility is managed, all in accordance with recognised legislation and industry standards.

Building Safety Has Changed

Compliance is no longer simply paperwork. It requires evidence.

The compliance landscape has changed significantly.

Following the Building safety Act 2022, organisations are expected to demonstrate that critical systems are properly maintained and function safely.

Compliance today means being able to provide evidence. Organisations should be able to demonstrate that:

- ✓ Risks have been identified
- ✓ Systems are regularly maintained
- ✓ Required inspections are completed
- ✓ Work is carried out to recognised standards
- ✓ Competent persons and competent businesses are used

What Happens When COMPLIANCE Is Ignored?

Failing to address hidden compliance risks can have serious consequences:

- Increased Fire Risk
- Business Interruption
- Compromised Life Safety
- Poor Indoor Quality
- Regulatory Challenges
- Reputational Damage

Our Services within Our Specialist Divisions

Interduct brings together two dedicated divisions, each focused on helping organisations manage risk and maintain compliance across critical building systems

Grease Extraction

Our Grease Extraction division provides specialist cleaning and maintenance services designed to ensure commercial kitchens operate safely and efficiently in accordance with recognized industry standards. From routine extraction cleaning to kitchen deep cleans and vertical riser cleans including maintenance, our experienced teams deliver professional services in accordance with industry standards

Ventilation & Fire Compliance

Our Ventilation & Fire Compliance division helps organisations manage the hidden risks within essential building systems. Through specialist inspection, testing, maintenance and remedial services, we support the safe and effective operation of ventilation, extraction and passive fire-protection systems.

We provide clear reporting, photographic evidence and practical recommendations—helping clients demonstrate compliance, improve system performance, reduce risk and protect people, property and business continuity

SERVICES INCLUDE

KITCHEN EXTRACTION CLEANING

Commercial kitchens operate in a demanding environment where safety, compliance and operational efficiency must be balanced every day.

From busy restaurants and hotel kitchens to large-scale catering facilities, ventilation systems play a critical role in maintaining safe and effective kitchen operations. Regular cleaning and removal of grease, oil and other deposits that accumulate within the system help ensure the site remains compliant while significantly reducing the risk of fire.

Our nationwide teams work in accordance with the guidance and recommendations of TR19® Grease and NAADUK-21, cleaning the entire extraction system using safe, approved methods. A full photographic report and certification of the cleaning are provided for your compliance records.

VERTICAL RISER AUDITS

We audit your vertical riser to determine whether cleaning is required by carrying out a Wet Film Thickness Test (WFTT). This assesses whether grease levels remain within the acceptable limits set by TR19® Grease and NAAD-21 guidelines.

A full photographic report and certification will be provided where the riser meets the required standards. If the system fails, we will supply a detailed photographic report together with a quotation for the recommended cleaning works.

VERTICAL RISER CLEANING

We ensure that the vertical riser section of your extraction system, whether accessed externally or internally within a building, is cleaned using our specialist chemical wash method. This ensures the entire system, from the base to the discharge point, is thoroughly cleaned and meets the national specifications set out in the TR19® Grease and NAADUK-21 recommendations.

A full photographic report and certification of the cleaning are provided for your compliance.

KITCHEN DEEP CLEANS

Cleaning commercial kitchens is essential to help prevent foodborne illnesses, maintain compliance with health and safety regulations, and reduce the risk of fire.

A professionally cleaned kitchen also protects your business's reputation, extends the lifespan of valuable equipment and appliances, and creates a cleaner, safer working environment for your staff.

A full photographic report and certification of the clean are provided for submission to your insurance company.

GREASE TRAPS

Regular cleaning of kitchen grease traps prevents fats, oils and grease from solidifying within the drainage system. Routine maintenance helps avoid costly blockages, eliminate unpleasant odours, reduce serious fire hazards, and ensure compliance with UK environmental and trade effluent regulations.

Ventilation & Fire Compliance

SERVICES INCLUDE

TR19® AIR HYGIENE

Maintain healthier indoor environments and demonstrate compliance.

Our TR19® Air Hygiene service provides specialist inspection, assessment and cleaning of ventilation systems in accordance with recognised industry guidance. Services include internal ductwork inspections, deposit-thickness testing, targeted cleaning and post-clean verification, supported by photographic evidence and detailed reporting.

Where required, we can also undertake microbiological sampling and EVT testing with analysis to identify potential bacterial or fungal contamination within ventilation systems. This evidence-led approach helps organisations improve indoor air quality, optimise system performance and demonstrate effective ventilation-hygiene management across commercial and public buildings.

FIRE DAMPER TESTING & REMEDIALS

Protect your building's fire compartmentation.

Fire dampers are critical life safety devices designed to prevent the spread of fire and smoke. Our specialist inspections, testing and remedial works help ensure dampers operate correctly and comply with current legislation and recognised standards.

TR19® EXTRACTION REMEDIAL WORKS

Restoring ventilation systems to safe and compliant operating standards. Where inspections identify defects, inadequate access or non-compliant installations, our experienced engineers deliver targeted remedial works to ventilation and extraction systems. This may include installing or upgrading access panels, repairing or replacing damaged ductwork and components, improving system integrity and addressing issues that prevent effective inspection, cleaning or maintenance.

All completed works are documented with photographic evidence and clear reporting—helping organisations improve system performance, reduce risk and demonstrate compliance with relevant legislation, recognised industry standards and TR19® guidance.

LEV TESTING & CLEANING

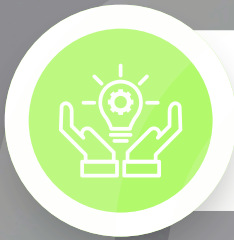

Supporting healthier and safer working environments.

Local Exhaust Ventilation (LEV) systems play a vital role in capturing and controlling airborne dust, fumes, vapours and other hazardous contaminants at source.

Our specialists provide thorough examination and testing, system-performance assessments, cleaning and condition inspections. We identify defects that could reduce control effectiveness and provide clear reports, test results and practical remedial recommendations—helping organisations protect employees, maintain effective extraction and demonstrate compliance with relevant workplace-safety requirements.
